Bitcoin paper wallet

Bitcoin paper wallet

Bitcoin paper wallet

File Decryption Instructions

Read the QR code and save its content to a file named `secret.b64`.

Alternatively, the content is also written as text in the base64 format. Type it into a text file (`secret.b64`). Convert the base64 file into the binary file (`secret.enc`) using:

```
$ base64 -d secret.b64 > secret.txt
```

The content of this file (`secret.txt`) is the backup passphrase seed used to create my bitcoin wallet, what may be used to restore it.

Wallet Info

- Wallet name: `mywallet`
- File created: `using 4.5.8, on 2024-11-08`
- Keystore type: `standard`
- Script type: `p2wpkh`
- Seed available: `True (segwit)`
- Keystore type: `bip32`
- Lightning: `Enabled`
- Lightning Node ID: `011ec4d6f23ca6cabae58ec23cd061a2ebbd731ee1234567890ba2abc1d456789a`
- Master Public Key: `zpub6npA1st12WxEeLmfZxB7j1AoXq7K3CyrzATSubynHSh2pXQq2QZnbZ1TuPjNnH`
- Master Public Key (cont): `51kCp414fgyo2Xo3vGo9rY67xnEUbHdD9GmMJZ3T9FQvz`
- Derivation path: `m/0h`
- BIP32 Root Fingerprint: `6eb2f3aa`
